The information published in this document is believed to be accurate at the time of publication. However, because we are constantly working to improve our products, specifications are subject to change without notice. Consult your local Pella representative for up-to-date product information.

Images included are not to scale, and may not show the latest version of any window or door product, review install instructions or consult Pella Architectural Services for applications.

Introduction

This section presents available installation accessories which, when used in conjunction with proper Pella installation procedures, will provide for a robust installation for single or combination units. Window and door attachment accessories used for both clad and primed wood exterior units are illustrated in
this section.

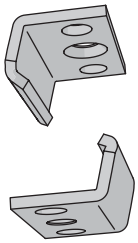

Aside from attachment accessories, this section reviews accessories to meet the following requirements:

- Combination applications, such as mullion covers, expansion mullion covers, Reinforcement mullions and bay and bow accessories.
- Interior casings and stools
- Subsills
- Traditional and flat trim

- Use the structural performance chart below to determine if your monumental single- or double-hung window requires brace clips.
- Monumental single- and double-hung units are designed to meet closed window pressures, both positive and negative, as shown in load chart when glazed with the appropriate glass and properly installed.
- The window design pressure is defined in the Product and Glazing Performance section at PellaADM.com. Units must be glazed with appropriate glass type and thickness to meet design pressures shown.
- You may use any unit whose design pressure equals or exceeds the required design pressure for your building.

SILL

To determine window openings for typical installations, add 3/4" to frame width and 3/4" to frame height.

- For large size units, out of plumb opening, and/or in masonry construction, the need for additional jamb clearances should be reviewed.
- Typical installation details and accessories are shown in the Installation Details and Installation Accessories sections.
- Determine if unit performance meets design requirements. Unit performance class and grade are in each product section.

Clip Installation

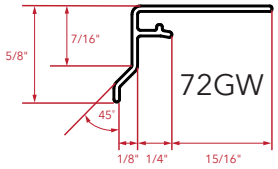

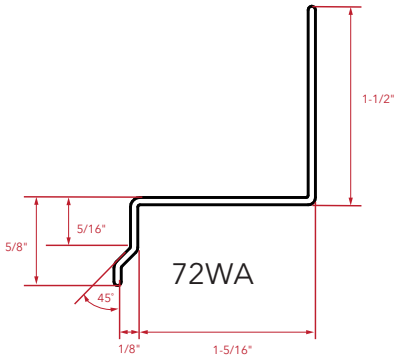

To determine window openings for typical installations, add 3/4" to frame width and 3/4" to frame height.

- For large size units, out of plumb opening, and/or in masonry construction, the need for additional jamb clearances should be reviewed.
- Typical installation details and accessories are shown in the Installation Details and Installation Accessories sections.
- Determine if unit performance meets design requirements. Unit performance class and grade are in each product section.

Clad Wood Subsill

Subsills are recommended for installations where recaulking would be difficult or high weather exposure exists due to the height or location of the building. The need for the subsill weep system is increased where there are multiple units in a given opening.

Fasten Sill of Unit to Subsill as Required.

Continuous Bead of Sealant

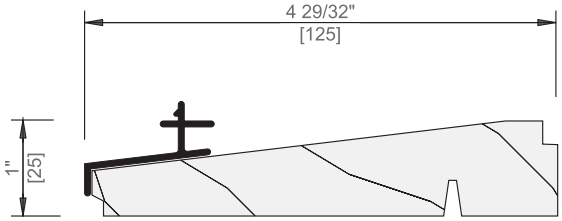

FASTEN WOOD SUBSILL TO OPENING @ 16" [406] O.C.
SEAL ENDS

FRAME EXPANDER #47D5
DO NOT SEAL TO OPENING

NOTE: SET CLAD WOOD SUBSILL IN SEALANT AND SEAL ENDS AND EXTERIOR BOTTOM EDGE TO OPENING. WINDOW OPENING SILL MUST BE LEVEL PRIOR TO SETTING SUBSILL.

CLAD WOOD SUBSILL #4049
AND CLIP #7366

Scale 6" = 1' 0"

Used with Pella clad windows.

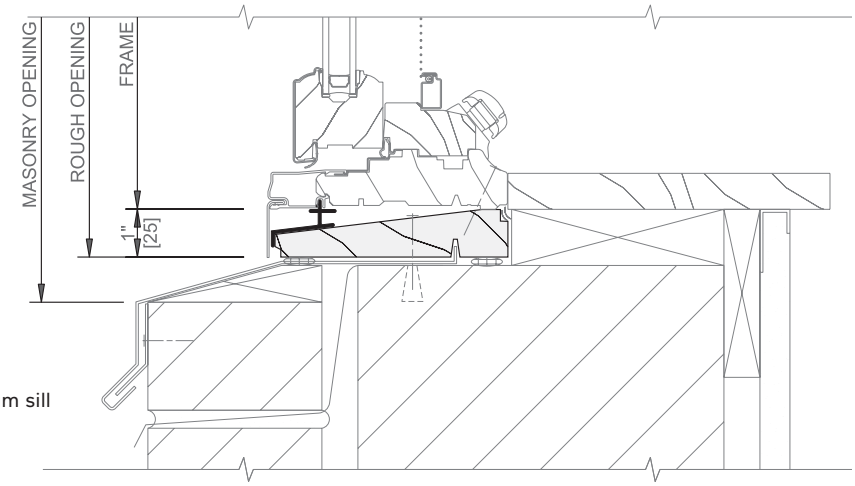

Note: The clad wood subsill is an open weep system. An interior air seal is critical to the performance of this system. Also, DO NOT SEAL the exterior frame expander to the opening.

Fasten Sill of Unit to Subsill as Required.

FASTEN WOOD SUBSILL TO OPENING @ 16" [406] O.C.
SEAL ENDS

Continous Bead of Sealant.

FRAME EXPANDER #47D5
DO NOT SEAL TO OPENING

Detail at right: Custom 0.05" (1.27) aluminum sill flashing used with clad wood subsill.

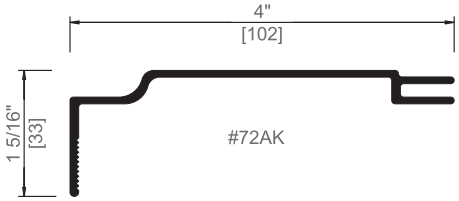

NOTE: SET CLAD WOOD SUBSILL IN SEALANT AND SEAL ENDS AND EXTERIOR BOTTOM EDGE TO OPENING WINDOW OPENING SILL MUST BE LEVEL PRIOR TO SETTING SUBSILL.

Scale 3" = 1' 0"

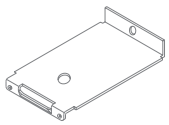

- A continuous perimeter line of sealant is required on the interior with clad/wood subsill #4049.
- Where the aluminum comes into contact with the cement materials, apply protective coating to separate galvanically incompatible materials.
- The clad/wood subsill is a primed, preservative treated wood for use with Pella aluminum clad/wood windows.
- The aluminum frame expander covers the front edge of the subsill.

L Receptor Application

Scale 6" = 1' 0"

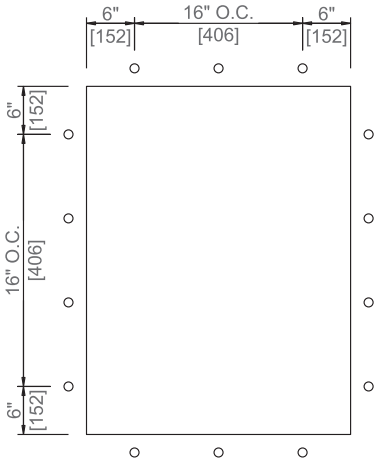

Used at head and jambs where interior installation is required. A subsill is recommended at sill. Unit attaches to receptor with clip #5027.

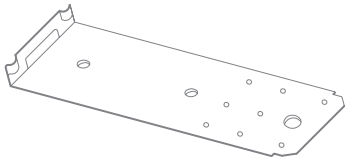

#5027

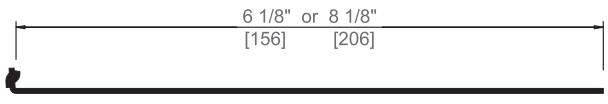

Perimeter clip spacing to be 6" (152) from the edge of each unit and 6" [152] from both sides of a joining mullion.
Typical spacing: 16" [406] O.C.
Each clip will hold 100lb. if attached with anchors that will hold 100lb.

INSTALLATION CLIP #5071

Installation clips #5071 are to be spaced @ 18" (457) O.C. (minimum of two per side) at head, jambs and sill.
See schematic drawing.

Reinforcing Mullion Application

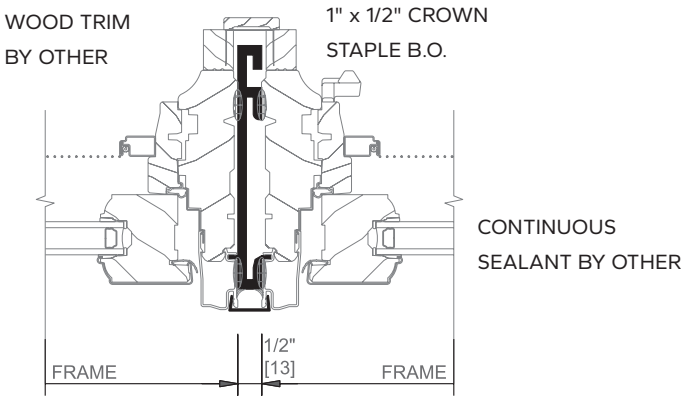

1. Attach 1/2" mullion Reinforcements with clips #512C, 000F, 512B or 512D.
2. Can be used either horizontally or vertically for wind load mullion Reinforcement. Note: Recommended use is vertically with subsill for large combination assemblies.
3. Do not use as part of building structure.
4. Refer to Combinations Section for wind load information, (max. Length 144").

NOTE: Apply continuous bead of sealant to inside corners of mullion cover before installing to units.

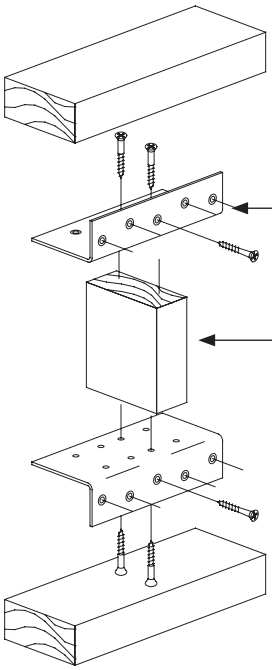

NOTE: Apply continuous bead of sealant to inside corners of mullion cover before installing to units.

Example Assembly

Refer to the Combination Recommendations section and Combination size tables to determine required Reinforcement method.

Factory Assembled Wood Mullion End Anchors

Rough Framing: Wood, Concrete, CMU, etc.

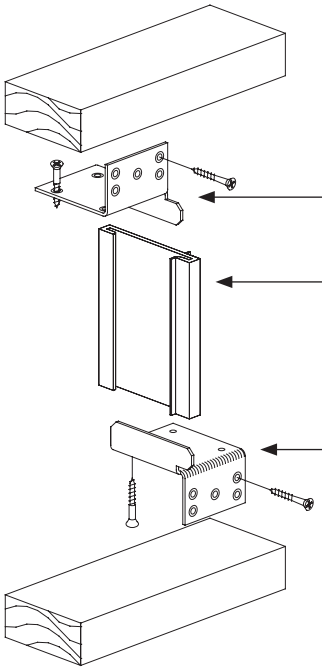

Wood Mullion Anchor

Wood Reinforcement or mullion 1" to 4" on 1/2" increments.

End Anchors Attachment:

- **For Wood Framing:** Use 5 - #10 x 3" Wood Screws.
- **For Concrete/CMU:** Use 5-3/16" Masonry Screw.

1/2" Fin Mullion End Anchors

Rough Framing: Wood, Concrete, CMU, etc.

Fin Anchor #512D

1/2" x 3-9/16" Reinforcing Mullion #0A6G

Fin Anchor #512D

End Anchors Attachment:

- **For Wood:** Use 5 - #10 x 3" Wood Screws.
- **For Concrete/CMU:** Use 3/16" Masonry Screw.

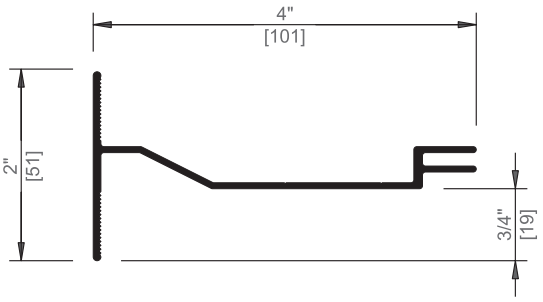

Screws have a 1" embedment into wood buck or concrete below subsill.

The 1/2" mullion assembly with end anchors 512D (fin mullion anchor), 000F (high performance fin mullion anchor) or 512A (wood fin mullion anchor) allow for installation of combinations that are assembled prior to being placed in the opening. Combinations assembled with this method should not exceed 144 square feet in total size. Always handle combinations in vertical orientation.

New Construction, Punched Opening Installation Systems
Mulling Considerations

Burlington Apartments, Portland, OR

Ankrom Moisan Associated Architects

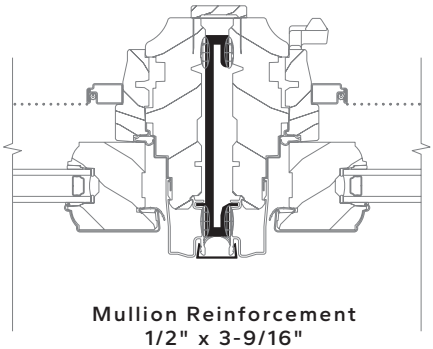

These recommendations apply to a typical grouping of any combination of window units that form a four-way mullion intersection.

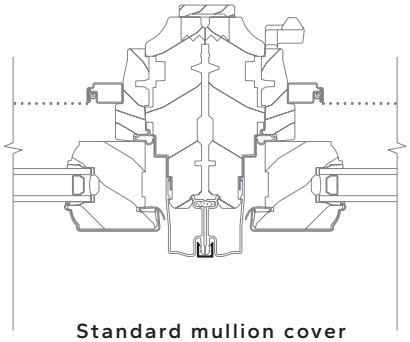

Refer to single-unit opening recommendations in addition to the following:

1. 1/2" clearance is recommended at each jamb in masonry construction and/or when window opening height or width is 10' or greater.
2. All four-way mullion intersections require Reinforcing mullion in one direction (either vertically or horizontally). See mullion load chart pages in the Installation section on PellaADM.com.
3. Check combination (joining) mullion limitation for specified wind loading. Combination (joining) and Reinforcing mullions are shown on the mullion load chart pages in the Installation section on PellaADM.com.
4. Subsill systems that weep incidental moisture to the exterior are recommended for water management in openings where the potential for water infiltration is increased and may not be adequately managed by the building weather barrier, flashings and drainage system. Sample conditions include, but are not limited to: increased level of exposure due to multi-story construction, high weather exposure, recaulking would be difficult or unlikely, non-standard installation methods, or when there are multiple units joined within the opening.

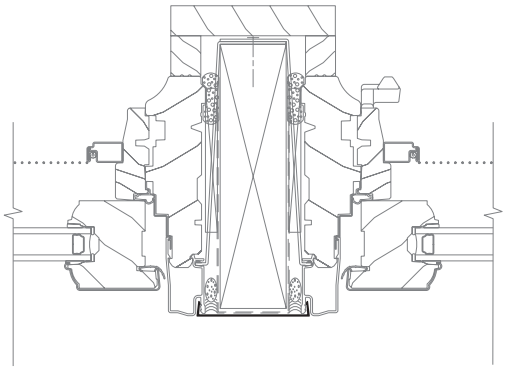

If lower unit is venting, horizontal Reinforcing mullion may be required to carry weight of upper units. See Weight Limitations Over Windows information in the Installation and Performance section on PellaADM.com.

FRAME EXPANDER RECEPTOR

Used to receive and trim outside edge of frame expander as an alternate to face-screwing edge into blocking. Return leg can be field-trimmed as required.

Application: New Construction or Renovation

- For use with aluminum-clad wood windows
- Provides the look of flat trim
- Receptor available for wide trims
- Paint finish that matches windows
- Available with or without brickmould
- Custom brickmould profiles available
- Straight or curved
- Trim to frame opening
- Factory Supplied Frame Expander Kits available, trim is processed and notched to length per unit configuration, saves time and scrap on the job site.

Used at head, jamb and/or sill.

Factory Supplied Frame Expander Kits

These kits are factory cut and notched to fit each side of a Pella aluminum clad or Pella Impervia products with accessory groove. The ends are prepped for overlapping butt joints which allows installers to leave the 90 degree overlap or field-cut a mitered corner.

- Maximum size is 144" x 144"
- Trim comes processed and notched to length per unit configuration.
- Notches begin at the outside of the frame and tails are longer to accommodate unit and combination growth tolerances.
- No need to calculate the number of lineals a job will require and saves time and scrap on the job site.
- Available on all Aluminum Clad products, Impervia products and entry doors, including curved and angled shapes.
  - Curved Shapes – Frame expander with Receptor Kits will not be available for shapes that include curves. Frame expander (without receptor) kits will be available for most curved and angled shapes. (Curved frame expander with receptor is still available - just not in this configured kit).
  - Angled Shapes – Frame expander and Frame expander with receptor kits are available for most angled shapes. Receptors are cut long to accommodate field miters.
  - Overlapping Frame Expanders - No kits will be available with overlapping curved frame expanders.
  - Pella Impervia – Fits both the fiberglass and aluminum clad accessory grooves.

PELLA PQM ORDERING DETAILS

The new frame expander and frame expander with receptors kits can be found in PQM in the wrapping screen for Architect Series, Designer Series, Pella ProLine 450 Series, Support Products, Impervia and Entry Doors Products (where applicable).

Under 'Exterior Frame Options / Exterior Trim',
select Frame Expander Kit or Frame Expander with Receptor Kit

Choose from 1", 1-3/4", 2-1/2", 4", 6" Frame expander widths

Shipping Details

The frame expander and frame expander with receptor kits are factory supplied, shipped separate from the product.

Straight, parts will have the room location and line number printed on the back. Up to 4 kits (straight pieces only) may ship in a single box.

Factory Applied Enduraclad® Exterior Trim Ordering Information

Head to Jamb joints are mitered except for 3-1/2" Flat Casing, which uses butt joints and head end caps.

Jamb pieces are mitered to the slope of the sill. The sill is notched where the jambs meet the sill. Sill nose extensions are included where needed. Sill end caps are included.

PELLA PQM ORDERING DETAILS

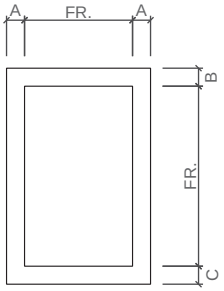

(Under 'Wrapping for Mull Group')

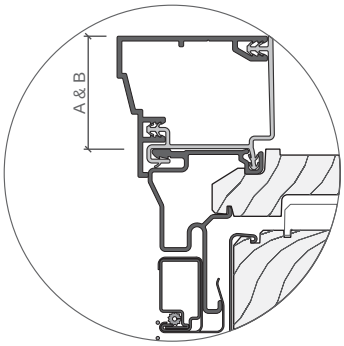

1. Attachment Method: Select EnduraClad® Exterior Trim
2. Installation Method: Select New Construction or Full Frame Replacement
3. Head Exterior Trim: Select from standard options (Custom profile requests will be validated by PASS and Custom Solutions teams)
4. Sill Exterior Trim: Select from standard options - selections will be limited according to compatibility (windows only)
5. New dimensions Added for Order Verification: Exterior Overall Width/Height Including Trim (does not include 3/8" per side for sealant, foam, backer rod, shims, etc.)

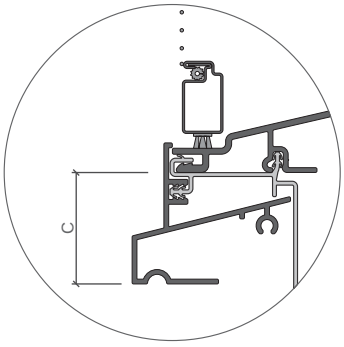

All applied trim includes end caps as needed and installation fin as determined by your selections in PQM (new construction or replacement/renovation).

3-1/2" Trim Fins are used for flashing purposes only, and are not intended for anchoring/attachment of the unit.

Service parts are shown on following pages for repairing/ replacing damaged parts only. Performing whole unit field application of EnduraClad Exterior Trim in the field may result in voiding product warranties.

	A	B	C			
	Jamb (single)	Head	3-1/2" Flat Casing Sill	1/2" Sill Nose	1" Sill Nose	2" Sill Nose
Frame to exterior trim						
1-1/2" Brickmould	+ 1.18"	+ 1.18"	—	+ 1.18"	+ 1.892"	+ 2.892"
3-1/2" Brickmould	+ 3.21"	+ 3.21"	—	+ 1.18"	+ 1.892"	+ 2.892"
3-1/2" Flat Casing	+ 3.21"	+ 3.21"	+ 3.21"	+ 1.18"	+ 1.892"	+ 2.892"

ANCHOR TO OPENING WITH STAINLESS STEEL SCREWS AND NEOPRENE WASHERS @ 16" [406] O.C. SEAL HEADS

BACKER ROD AND SEALANT PROVIDE 3/8" [10] DIA. WEEPS

SHIM AND LEVEL UNITS WITH IMPERVIOUS SHIMS

CUSTOM 0.050" [1.27] ALUMINUM SILL FLASHING #M123 WITH CLIP #M129

NOTE: SEAL ENDS OF 0.050" [1.27] ALUMINUM SILL FLASHING TO OPENING WITH A CONTINUOS BEAD OF SEALANT. APPLY SEALANT ALONG FULL LENGTH OF BACK LEG OF SILL FLASHING. TIE INTO INTERIOR SEALANT AT JAMBS.

Custom Aluminum Sill Flashing

- Custom 0.050" (1.27) aluminum sill flashings can be fabricated to specifications as required. Detail shows typical conditions where custom aluminum sill flashing might be used.
- The use of this sill flashing is recommended only in climates where thermal conductance is not likely to occur.
- Where aluminum comes into contact with cement materials or steel, apply protective coating to separate galvanically incompatible materials.

Pre-Assembled Curved Trim

Available on all curved products except Premium Wood Entry Doors.

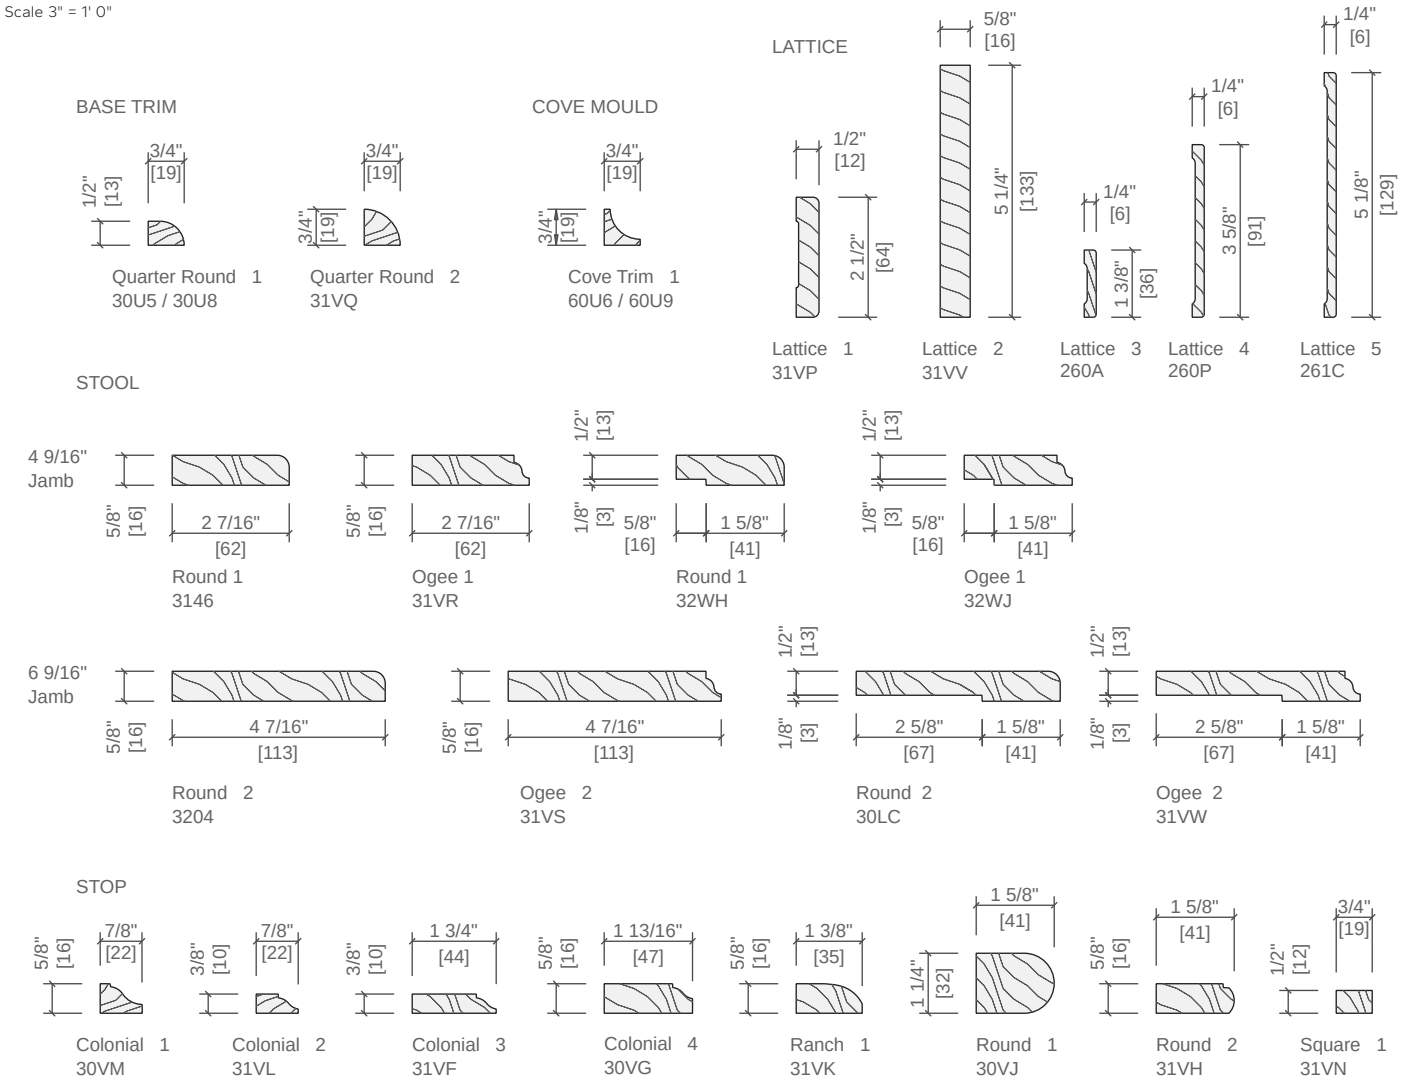

Pine and Oak Curved Interior Trim will come with a 1" minimum excess on both ends, and will need to be trimmed to size to ensure a tight fit against the Lineal Interior Trim sections.
Please Note: Full Circles and Ovals will come in 2 pieces, and will also need to be trimmed to size.

Lineal Trim to complement the Curved Trim Assembly for units that require it will still be branch supplied.

Curved Assemblies are ordered Under 'Wrapping for Mull Group'.
