

IMPORTANT SAFETY AND PRODUCT INFORMATION – WINDOW

CAUTION: Many windows in older homes are painted with lead-based paint. Removal of old windows may disturb this paint. Proper precautions must be taken to minimize exposure to dust and debris. Consult state or local authorities and/or go to www.epa.gov/lead for more information.

WARNING: To ensure safety and security and help prevent property damage, including possible damage to your window or door, close and lock windows and doors any time they are not being used for venting on a nice day, and particularly during high winds or rain.

IMPORTANT NOTICE

Because all construction must anticipate some water infiltration, it is important that the wall system be designed and constructed to properly manage moisture. Pella Corporation is not responsible for claims or damages caused by anticipated and unanticipated water infiltration; deficiencies in building design, construction and maintenance; failure to install Pella products in accordance with Pella's installation instructions; or the use of Pella products in wall systems which do not allow for proper management of moisture within the wall systems. The determination of the suitability of all building components, including the use of Pella products, as well as the design and installation of flashing and sealing systems are the responsibility of the Buyer or User, the architect, contractor, installer, or other construction professional and are not the responsibility of Pella.

Pella products should not be used in barrier wall systems which do not allow for proper management of moisture within the wall systems, such as barrier Exterior Insulation and Finish Systems (EIFS) (also known as synthetic stucco) or other non-water managed systems. Except in the states of California, New Mexico, Arizona, Nevada, Utah and Colorado, Pella makes no warranty of any kind on and assumes no responsibility for Pella windows and doors installed in barrier wall systems. In the states listed above, the installation of Pella Products in barrier wall or similar systems must be in accordance with Pella's installation instructions. Product modifications that are not approved by Pella Corporation will void the warranty.

Care and Maintenance

Care and maintenance information is available by contacting your local Pella retailer. This information is also available at www.pella.com.

Cleaning Instructions

GLASS—Remove any protective film and labels and clean the glass, using a soft, clean, grit-free cloth and mild soap or detergent. Be sure to remove all liquid by wiping dry or use a clean squeegee.

FACTORY FINISHED PRODUCT: Pella product that has been prefinished with stain or paint from the factory requires no additional finishing. Clean the surface with mild soap and water.

PELLA® ALUMINUM CLAD OR IMPERVIA FRAMES: The interior and exterior frame and sash are protected with a tough factory finish. Clean this surface with mild soap and water. Stubborn stains and deposits may be removed with mineral spirits. **DO NOT** use abrasives. **DO NOT** scrape or use tools that might damage the surface.

ENCOMPASS BY PELLA®, PELLA® 150 SERIES AND PELLA® 250 SERIES WINDOWS FRAMES: The vinyl frame may be cleaned using the same method as the glass. For stubborn dirt, a "non-abrasive" cleaner such as Bon-Ami® or Soft Scrub® may be used. Do not use solvents such as mineral spirits, toluene, xylene, naphtha or muriatic acid as they can dull the finish, soften the vinyl and/or cause failure of the insulated unit seal. Do not use Isopropyl Alcohol on laminated surfaces as it will damage the finish. Keep door tracks clear of dirt and debris. Keep weep holes open and clear of obstructions.

DO NOT use abrasives. **DO NOT** scrape or use tools that might damage the surface.

Notice: **DO NOT** use inappropriate solvents or brickwash or cleaning chemicals. If you do, permanent damage can result and the product failure, loss or damage would not be covered by the Limited Warranty.

Interior Finish (Wood Windows)

Paint or finish immediately after installation.

If products cannot be finished immediately, cover with clear plastic to protect from dirt, damage and moisture. Remove any construction residue before finishing. Sand all wood surfaces lightly with 180 grit or finer sandpaper. **DO NOT** use steel wool. **BE CAREFUL NOT TO SCRATCH THE GLASS.** Remove sanding dust. Pella products must be finished per the below instructions; failure to follow these instructions voids the Limited Warranty.

NOTE: *To maintain proper product performance do not paint, finish or remove the weatherstripping, mohair dust pads, gaskets or vinyl parts. Air and water leakage will result if these parts are removed. After finishing, allow venting windows and doors to dry completely before closing them. If paint, stain or finish gets on the weatherstripping, wipe it off immediately with a damp cloth.*

Window Cleaning and Prep Instructions for Unfinished or Primed windows: Dry wipe dust from windows gently. Examine window for possible smudges or fingerprints made from normal handling or construction. To remove smudges, lightly wipe surface with warm water. Scuff sand with light grade sand paper or abrasive pad (220 grit or higher). Rinse surface with warm water. Let window surfaces dry completely before applying finish.

Finish the windows as soon as possible after installation.

- On casement and awnings, it is optional to paint, stain or finish the vertical and horizontal sash edges.
- On single-hungs and double-hungs, do not paint, stain or finish the vertical sash edges, any finish on the vertical sash edges may cause the sash to stick; it is optional to paint, stain or finish the horizontal sash edges.

Pella Corporation is not responsible for interior paint and stain finish imperfections for any product that is not factory-applied by Pella Corporation. For additional information on finishing see the Pella Owner's Manual or go to www.pella.com.

The use of unapproved finishes, solvents or cleaning chemicals may cause adverse reactions with door materials. Pella will not be responsible for problems caused by the use of unapproved materials. If in doubt, contact your local retailer or representative.

Exterior Finish of Existing Frame (Pocket Replacement)

It is the responsibility of the homeowner, contractor or installer to ensure any exposed unfinished wood is covered or finished. Possible methods include, however are not limited to, covering with aluminum coil stock or painting.

For Casement Hardware Installation go to: www.installpella.com/trimaccessory/hardware.

FULL FRAME REMOVAL WHEN PREPARING TO INSTALL A NEW BLOCK FRAME AND RENOVATION® / PRECISION FIT® WINDOWS

This method of Full Frame Removal involves removing the sash and entire frame of the existing window from the wall. The resulting opening is the original rough opening. The existing window nailing fins are usually nailed to the studs in frame construction with siding, brick veneer or other exterior material applied over the fin on the outside. The interior may have a drywall return from the wall to the window frame.

CAUTION: Many windows in older homes are painted with lead-based paint. Removal of old windows may disturb this paint. Proper precautions must be taken to minimize exposure to dust and debris. Consult state or local authorities and/or go to www.epa.gov/lead for more information.

TOOLS REQUIRED:

- Utility knife 
- Phillips and Standard screwdrivers 

- Pry bar 

- Reciprocating saw 

- Hammer 

- Putty knife 

- Deglazing wheel 

- Heat gun 

- Angle Grinder with cutting wheel 

**REMEMBER TO USE APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.
APPLY ADHESIVE FILM OR DUCT TAPE TO THE GLASS TO PREVENT BREAKAGE.**

A. **Score the paint or varnish** between the interior trim and the wall or between the drywall return and the window frame to minimize damage.

B. **Remove the interior trim.**

To collapse aluminum frames follow steps C-M.

To cut vinyl, clad wood, or aluminum frames out of the opening, see steps M and N.

C. **Score the sealant** or paint between the exterior siding or brick and the window frame.

D. **Remove the screen and vent sash** from the old window. If it is not removable, see steps G-I.

E. **Remove the division bar** by removing the screws at the ends or cutting it with a reciprocating saw.

F. **Remove the other sash/panel.** Remove any screws holding the fixed sash. Slide and lift out of the channel (sliding windows) or tilt and release from the balance assembly (hung windows).

If the sashes are not removable or the glass is sealed to the frame:

G. **Remove the glazing bead** using a putty knife or small pry bar.

H. **For single pane windows with divided lights (grids):** Use an angle grinder with a cut-off wheel to cut the end of the bars where they intersect with the sash or frame. This will allow the window glass to be removed more quickly.

I. **Heat the glazing seal** using an electric heat gun.

J. **While applying heat,** press a de-glazing wheel between the glass and sash or frame. Continue around the perimeter of the sash or panel. Apply light, constant pressure to separate the glass from the sash or frame. Dispose or recycle the glass properly.

NOTE: Wear appropriate personal protective equipment and keep the heat source away from flammable materials.

K. **Pry the frame away from the brick or siding.** Use a block of wood under the pry bar to protect interior or exterior finishes. Dispose or recycle the frame materials properly.

L. **Cut through the frame** using a reciprocating saw.

Cutting out vinyl, clad wood or aluminum frames:

M. **Temporarily pry any head flashing up** to avoid damaging or cutting it.

N. **Cut through the sealant line** and nailing fin on all four sides using a reciprocating saw. Ensure the blade does not penetrate the interior where damage can occur to the drywall.

Consult with local providers and authorities to recycle or properly dispose of old window components.

YOU WILL NEED TO SUPPLY:

- Moisture resistant shims/spacers 
- Fasteners (see nail fin anchor instructions and tables at the end of this booklet)
- Closed cell foam backer rod/sealant backer 
- Pella® SmartFlash™ foil backed butyl window and door flashing tape or equivalent 
- Low expansion, low pressure polyurethane insulating window and door foam sealant. **DO NOT** use high pressure or latex foams. 
- Pella Window and Door Installation Sealant or equivalent high quality, multi-purpose sealant 

TOOLS REQUIRED:

- Tape measure 
- Level 
- Square 
- Hammer 
- Stapler 
- Scissors or utility knife 
- Small flat blade screwdriver 
- Sealant Gun 
- Screw Gun with a Phillips Driver bit 
- Drill with 1/8", 5/32", 3/16" & 3/8" drill bits
- 1/8" Allen wrench 

Other construction materials may be required. Read and understand the instructions and inspect the wall conditions before you begin.

Store windows in upright position, out of direct sunlight.

TWO OR MORE PEOPLE WILL BE REQUIRED FOR THE WINDOW INSTALLATION.

1 PREPARING FOR INSTALLATION

- Remove plastic wrap and cardboard packaging from the window.** On laminate units, remove protective film from parts. Do not cut checkrail bands (if present) or remove plastic or foam shipping spacers located between the window sash and frame. **DO NOT** open the window until it is securely fastened.
- Inspect the product for any damage** such as cracks, dents or scratches. **DO NOT** install damaged windows.
- Remove screens and hardware** (if necessary). Label them and set aside in a protected area.

Windows with Half Screens:

From the exterior, pull one side of the screen near the shipping clips until the clips disengage from the frame. Rotate the shipping clips toward the exterior of the screen until they snap free from the screen.

Half screens of some vinyl windows can be removed from the interior.

Before Installation, remove dirt and debris from all surfaces of the opening.

- Read the entire instruction before proceeding.**

BY PURCHASING, INSTALLING OR USING PELLA PRODUCTS (INCLUDES PELLA GOODS AND PELLA SERVICES), YOU AGREED TO THE TERMS OF THE LIMITED WARRANTY AND YOU AND PELLA FURTHER AGREE TO ARBITRATE DISPUTES ARISING OUT OF OR RELATING TO PELLA PRODUCTS, AND YOU WAIVE ANY RIGHT TO PARTICIPATE IN A CLASS ACTION RELATED TO PELLA PRODUCTS unless you notify Pella of your decision to opt out of the Arbitration Agreement no later than ninety (90) calendar days from the date you purchased or otherwise took ownership of Your Pella Goods. Opting out of the Arbitration Agreement will not affect the coverage provided by any applicable limited warranty pertaining to Your Pella Products. For opt out information and additional details please read the Limited Warranty and Arbitration Agreement for your Pella Products at www.Pella.com/arbitration.

FULL FRAME REPLACEMENT WITHOUT DISTURBING BRICK OR SIDING FOR BLOCK FRAME WINDOWS

FOR USE IN BRICK OR SIDING WITH TRIM/J-TRIM AFTER THE COMPLETE REMOVAL OF A NAIL FIN WINDOW

1 PREPARE THE OPENING

Refer to the full frame removal instructions at the beginning of this booklet.

- Measure the width and height of the opening in the brick or siding (A). The window must be at least 1/2" smaller in width and height.
- Measure width and height of the opening in the wood framing or masonry (B). The window must be at least 1/2" smaller in width and height.

If the interior trim or return materials have been removed, skip to step 2A.

- Measure the width and height of the opening in the drywall return/stool (C) (if applicable).
- Measure the depth from the drywall to the exterior of the siding (if applicable). Compare this to the new window frame depth.

If the window is larger than the drywall return opening (C) and has a frame depth less than (D), it can typically be installed against the exterior edge of the drywall return. If the frame depth is larger than D, cut the drywall back with a utility knife and straight edge enough to allow the window to fit within the (D) depth. Note: Interior shades/blinds may have to be moved to the interior.

If the window is smaller than the drywall return opening, add treated blocking to the opening until the opening is approx. 1/2" larger in width and height than the window (see steps 3H-3L).

2 FLASH THE OPENING

Note: If there is an existing, functioning head flashing or if the opening is directly below a soffit or overhang, skip to step 3.

If building wrap exists at the head of the opening follow steps 2A-2C. If no building wrap exists, skip to step 2D.

- Prepare a head flashing with upturned leg by cutting it the same width as the brick/siding opening.
- Pry the top (head) j-channel/siding away from the sheathing enough so the head flashing can be slid under the house wrap.
- Insert the head flashing behind the brick/siding and behind the house wrap.

2 FLASH THE OPENING (Continued)

No Building Wrap

- Prepare head flashing with no up-turned leg by cutting it the same width as the brick/siding opening. The head flashing should not extend past the interior of the window frame.
- Apply (2) 3/16" beads of sealant. One at the interior edge of the flashing and one along the exterior edge of the sheathing.
- Apply a 3/16" bead of sealant at each corner connecting the two beads from step 2E.
- Secure the flashing to the opening over the sealant using roofing nails or corrosion resistant pan head screws at 12" max. spacing.

Important: The flashing must slope to the exterior.

Flashing may be installed before blocking at head (if required).

"Z" shaped flashing may be appropriate for some applications.

3 SEAL THE OPENING

- Clean the siding J-channel/trim or brick and rough opening thoroughly.
- Apply a 3/8" bead of sealant (or enough to cover the area) between the j-channel/trim and the sheathing at jambs (siding only). If a head flashing with upturned leg was used, seal between the back of the flashing and the sheathing at the head. Tool the sealant at head and/or jambs with a putty knife to press the sealant into the opening.
- Place a 3/8" bead of sealant at each corner of the opening.
- Apply flashing tape over the sealant at the head if a flashing with upturned leg was used. Extend the flashing tape 6" down each jamb. Cover the exterior surface of the drywall (if applicable).

FULL FRAME REPLACEMENT WITHOUT DISTURBING BRICK OR SIDING FOR BLOCK FRAME WINDOWS FOR USE IN BRICK OR SIDING WITH TRIM/J-TRIM AFTER THE COMPLETE REMOVAL OF A NAIL FIN WINDOW

3 SEAL THE OPENING (Continued)

- E. **Apply flashing tape at the sill**, folding it behind the brick or siding onto the surface of the building wrap (if applicable) and up each jamb 6". Apply up the exterior edge of the drywall. If 2 pieces of flashing tape are required, apply the 2nd so it overlaps the first by 1".

- F. **For brick, apply low expansion foam** at the jamb to seal between the back of the brick and the sheathing.
- G. **For siding, apply flashing tape** at each jamb extending 3" onto the head and sill. Cover the exterior edge of the drywall (if applicable) and extend the tape over the sealant onto the side of the trim or j-trim.

NOTE: The jamb flashing tape may also be used on brick. Apply sealant to the brick before application.

If the window is smaller than the drywall return opening, add treated blocking to the opening until the opening is approx. 1/2" larger in width and height than the window (see steps H-L).

- H. **Cut treated blocking** equal to the width and height (B) dimensions as necessary.
- I. **Rip the treated blocking** to a width less than (D). The width may be reduced to fit behind brick/siding or head flashing (see step 2).
- J. **Apply (2) 3/16" beads of sealant.** One just to the exterior of the drywall return and one along the exterior edge of the sheathing.
- K. **Apply a 3/16" bead of sealant** at each corner connecting the 2 beads from step 1J.
- L. **Secure the treated blocking** to the opening over the sealant using 2" corrosion resistant screws at 16" max. spacing.

4 SET AND FASTEN THE WINDOW

- A. **Install and level sill shims.** Place 1" wide x 1/4" to 3/8" thick shims 1/2" from each side. Keep shims back 1/2" from interior and exterior face of window. Place additional shims under each mullion and sliding window interlocker.

For vinyl windows, add shims so maximum spacing is 18".

- B. **Attach shims to prevent movement** after they are level.
NOTE: Improper placement of shims may result in bowing the bottom of the window.

- C. **Drill pilot holes in the window frame** (if they are not factory pre-drilled). Refer to the anchor and shim spacing instructions at the end of this booklet.

For windows being installed against the exterior of the drywall return, follow steps 4D and E.

- D. **Secure drywall return installation clips** using #8x 2-1/2" flat head screws at the jambs so they will align with each pilot hole in the window frame. These clips provide secure attachment when frame screws will not penetrate the framing or treated blocking.

- E. **Apply sealant** to the exterior edge of the drywall return on all four sides.

- F. **Insert the window** into the opening on the sill shims. Check to make sure the window rests against the drywall and is making contact with the sealant (if applicable).

- G. **Place shims and begin driving screws** at each predrilled hole in the window frame. When screwing into drywall return installation clips, use the screws from the clip package. Add additional shims at the ends of meeting rails and as necessary to ensure even reveal between the frame and sashes.

Refer to the anchoring instructions at the end of this booklet.

NOTE: Keep shims 1/2" from the exterior surface of the window to allow for backer rod and sealant.

- H. **Check for plumb, level, square** and window operation. Make any necessary adjustments to shims and finish installing frame screws.
- I. **Install interior sealant.** Refer to the interior sealant instructions at the end of this booklet.
- J. **Install exterior sealant.** Refer to the exterior sealant instructions at the end of this booklet.
- K. **Install interior and exterior trim** (if necessary).

Pella® Impact-Resistant Products have been tested in accordance with the large missile impact testing requirements of ASTM E 1886 and ASTM E 1996. Pella Impact-Resistant Products are neither hurricane proof nor are they shatter proof. Severe wind and rain may produce temporary conditions which exceed product performance standards. When these units are subjected to intense storms or extreme conditions, which exceed the intended design pressures, air, water and flying debris infiltration may occur.

Advanced performance and Impact-Resistant require the use of installation clips or screws through the frame. The use of fins or EnduraClad Exterior Trim is optional and will not affect anchorage requirements. Local building codes may have additional anchoring requirements.

Refer to FPAS installation instructions when applicable.

PLACE FRAME SCREWS OR CLIPS AT THE LOCATIONS INDICATED.

ARCHITECT SERIES® (850), IMPACT-RESISTANT WINDOW ANCHOR SPACING INSTRUCTIONS

Product	Edge Spacing (E)	Max. Intermediate Spacing (-S)	Fastener	Special Notes
			Wood *	
Casement/Awning	4"	15"	#10 x 3-1/2"	
Fixed Frame	6"	10"	#10 x 3-1/2"	PG 90 up to 60" x 60". Larger sizes are PG 60

* For concrete or masonry, use 3/16" masonry screws with 1-1/4" minimum embedment.
Refer to the supplemental instruction included with the unit for securing mullion end anchors (if applicable).

CASEMENT/AWNING OR FIXED FRAME

Installation Clip Attachment

PILOT HOLE LOCATIONS AND SIZES FOR FRAME SCREWS

ADVANCED PERFORMANCE AND IMPACT-RESISTANT

Pella® Impact-Resistant Products have been tested in accordance with the large missile impact testing requirements of ASTM E 1886 and ASTM E 1996. Pella Impact-Resistant Products are neither hurricane proof nor are they shatter proof. Severe wind and rain may produce temporary conditions which exceed product performance standards. When these units are subjected to intense storms or extreme conditions, which exceed the intended design pressures, air, water and flying debris infiltration may occur.

Advanced performance and Impact-Resistant require the use of installation clips or screws through the frame. The use of fins or EnduraClad Exterior Trim is optional and will not affect anchorage requirements. Local building codes may have additional anchoring requirements.

Refer to FPAS installation instructions when applicable.

PLACE FRAME SCREWS OR CLIPS AT THE LOCATIONS INDICATED.

ARCHITECT SERIES® (850), IMPACT-RESISTANT WINDOW ANCHOR SPACING INSTRUCTIONS

Product	Edge Spacing (E)	Max. Intermediate Spacing (S)	Fastener	Special Notes
			Wood *	
Double, Single or Simulated Hung	6"	see drawing above	#10 x 3"	Remove sashes and jamb covers. Drive 1 screw through each jamb liner support clip (top, bottom, checkrail and center of each sash). Drive 2 additional screws through the frame (or secure clips) 3" above and below the checkrail on each jamb. Drive additional screws through the frame (or secure clips) centered between each jamb liner support clip.

* For concrete or masonry, use 3/16" masonry screws with 1-1/4" minimum embedment.

Refer to the supplemental instruction included with the unit for securing mullion end anchors (if applicable).

- Simulated-hung only:** Remove the simulated-hung lock by removing the four screws from each lock.
- Remove the lower sash.** Raise the sash 6" or more and locate the two finger slides on the lower sash check rail. At the same time, slide each toward the center of the sash to disengage the wash lock stops and pull the sash towards the room side. The sash will tilt from the bottom.
- With the sash parallel to the floor,** lift one side of the lower sash until the terminal is removed from the balance shoe. Continue to lift the sash up until the terminal is released from the opposite side of the sash and can be removed from the shoe. Lift the sash up and out of the window frame. Repeat for both sashes. Set the sash in a safe location.
- Gently pry out the bottom of the jamb** insert and remove it completely.
- Shim behind each anchor location on both jambs.**
- Drill pilot holes through** the window frame into the rough opening. Install screws.

Finger slides are located on the top, back side of the lower sash.

(2) #6x 1-1/2" screws through clip into rough opening #6 x 1-1/2" screw

Clip option: Use clips in place of screws through frame. Screws are still required at jamb liner support clips.

Screws through jamb

Monumental Hung jamb liner support clip

ADVANCED PERFORMANCE AND IMPACT-RESISTANT

Pella® Impact-Resistant Products have been tested in accordance with the large missile impact testing requirements of ASTM E 1886 and ASTM E 1996. Pella Impact-Resistant Products are neither hurricane proof nor are they shatter proof. Severe wind and rain may produce temporary conditions which exceed product performance standards. When these units are subjected to intense storms or extreme conditions, which exceed the intended design pressures, air, water and flying debris infiltration may occur.

Refer to FPAS installation instructions when applicable.

PELLA® IMPERVIA® SERIES

Product	Edge Spacing (E)	Max. Intermediate Spacing (S)	Fasteners*	Special Notes
Casement / Awning Vent and Fixed	6"	16"	#8 x 2" Pan Head (provided)	Head and sill anchors not required for single-wide units with frame width less than 42".
Direct Set	6"	15"	#10 x 3" Pan Head (provided)	Install screws at pre-marked locations after removing interior frame covers (see below).

Units with Impact-Resistant glass for projects located in wind-borne debris regions must be anchored with frame screws or installation clips. The fin fastening (if applicable) is optional for flashing purposes.

Use factory pre-drilled holes and provided screws, if present.

*For concrete or masonry, use 3/16" masonry screws with 1-1/4" minimum embedment.

Clip Anchor Method Only

Slide clips into the frame groove and locate per the anchor spacing instructions. Use a small piece of flashing tape to hold the clips in place.

(3) # 8 x 1-1/4" screws through clip into rough opening

NOTE: Not applicable for windows with nail fin.

Screw through Frame -- Pilot Hole Location

Casement**

Direct Set***

** If an interior frame cover has a "Quick Release Band" around the cover, pull the band to help remove the cover.

*** Use putty knife; insert where indicated and slide cover to interior for removal.

PELLA® DEFENDER SERIES AND HURRICANESHIELD SERIES

Install / Frame Type	Edge Spacing (E)	Max. Intermediate Spacing (S)	Meeting Rail / Integral Mullion (M)	Special Notes
Fin	4"	8"	Varies*	Use factory pre-drilled holes, if present. Additional screws through frame may be required*.
Flange / Non Flange	6"	Varies*		

*Refer to the Florida Product Approval documents for fastener type and locations.

Sill fasteners may not be required*

Interior Sealant Instructions

CAUTION: Continuous backer rod (as necessary) and a high quality, low-odor interior sealant such as Pella Window and Door Installation Sealant (or equivalent) is recommended for commercial or high performance installations to create the continuous interior seal. Follow the directions on the cartridge. For standard performance or products with factory applied jamb extensions, use low pressure polyurethane insulating foams. Follow the directions on the can. Do not use high pressure or latex foams. Fiberglass batt or similar insulation is not recommended as it can absorb water and does not act as an air seal.

- Insert the nozzle or straw between the rough opening and window frame. This can be done from the interior or exterior.
 - Place a 1" deep bead of foam approx. 1" from the interior of the frame to allow for expansion. Do not fill the entire depth of the rough opening cavity.
- NOTE:** Apply foam between the frame and rough opening, NOT between jamb extensions and the rough opening.
- Re-Check window operation and remove remaining shipping spacers after foam installation. Excess foam may be removed with a serrated knife after it cures.
 - To ensure a continuous interior seal, apply sealant over or around any shims or clips interrupting the foam seal.

For windows set against drywall return or wood interior stops:

- Apply a corner bead of sealant where the frame and drywall return or stop meet. This sealant covers any gaps and creates a smooth transition between materials. Applying a continuous interior bead of sealant eliminates the need for low expansion foam.
- Re-check window operation and remove shipping spacers after foam installation. Excess foam may be removed with a serrated knife after it cures.

Figure 1

Exterior Sealant Instructions

CAUTION: Use a high quality, multi-purpose exterior sealant such as Pella Window and Door Installation Sealant. Follow the directions on the cartridge.

- If the space between the new window frame and the opening is greater than 1/4", go to step (B). If less than 1/4" or if the frame does not project past an exterior stop (Figure 1), skip to step (C).
- Insert backer rod 3/8" deep in the space around the window. Backer rod adds shape and controls the depth of the sealant line.
- Apply a continuous bead of sealant where the new frame contacts the exterior stop (Figure 1) or between the frame and the opening (Figures 2, 3 and 4). Continue the seal across the bottom of the sill adapter (if applicable). Do not block weep holes or weep hoods with sealant.

NOTE: For full frame replacement in brick or siding, where the wall is designed to manage water do not leave gaps or weeps in the exterior sealant. For pocket replacement, if weep holes are not present in the sill adapter and the existing sill slopes to the exterior, leave weep gaps in the sealant (Figure 5).
