To ensure safety and security and help prevent property damage, including possible damage to your window or door, close and lock windows and doors any time they are not being used for venting on a nice day, and particularly during high winds or rain. Ensure all windows and doors are properly fastened to the wall structure according to the product anchor instructions. It is the responsibility of the Buyer or User, the architect, contractor, installer, or other construction professional to ensure the appropriate windows and doors are chosen for the project and the wall construction is designed to resist all loads in accordance with local building code requirements.

Many doors in older homes are painted with lead-based paint. Removal of old doors may disturb this paint. Proper precautions must be taken to minimize exposure to dust and debris. Consult state or local authorities and/or go to www.epa.gov/lead for more information.

Pella products must be stored in an upright, level position not exposed to weather. The storage must be ventilated and provide protection from direct sunlight and excessive temperature.

Because all construction must anticipate some water infiltration, it is important that the wall system be designed and constructed to properly manage moisture. Pella Corporation is not responsible for claims or damages caused by anticipated and unanticipated water infiltration; deficiencies in building design, construction and maintenance; failure to install Pella products in accordance with Pella's installation instructions; or the use of Pella products in wall systems which do not allow for proper management of moisture within the wall systems. The determination of the suitability of all building components, including the use of Pella products, as well as the design and installation of flashing and sealing systems are the responsibility of the Buyer or User, the architect, contractor, installer, or other construction professional and are not the responsibility of Pella.

Pella products should not be used in barrier wall systems which do not allow for proper management of moisture within the wall systems, such as barrier Exterior Insulation and Finish Systems (EIFS) (also known as synthetic stucco) or other non-water managed systems. Except in arid regions, including California, New Mexico, Arizona, Nevada, Utah and Colorado, Pella makes no warranty of any kind on and assumes no responsibility for Pella windows and doors installed in barrier wall systems. In the states listed above, the installation of Pella Products in barrier wall or similar systems must be in accordance with Pella's installation instructions. Product modifications that are not approved by Pella Corporation will void the warranty.

CARE AND MAINTENANCE: Refer to the Pella Owner's Manual. Visit www.pella.com or your local retailer for more information.

CLEANING INSTRUCTIONS: Refer to the Pella Owner's Manual for comprehensive maintenance and cleaning information. Visit www.pella.com or your local retailer for more information.

DO NOT apply any other types of film to the glass. Doing so could void product warranty.

DO NOT use abrasives. DO NOT scrape or use tools that might damage the surface.

DO NOT use inappropriate solvents or brickwash or cleaning chemicals. If you do, permanent damage can result and the product failure, loss or damage would not be covered by the Limited Warranty.

FINISHING INSTRUCTIONS (WOOD PATIO DOORS): Paint or finish immediately after installation.

If products cannot be finished immediately, cover with clear plastic that allows venting to protect from dirt, damage and moisture. Remove any construction residue before finishing. Sand all wood surfaces lightly with 180 grit or finer sandpaper. DO NOT use steel wool. BE CAREFUL NOT TO SCRATCH THE GLASS. Remove sanding dust. Pella products must be finished according to these instructions, and those in the Pella Owner's Manual. failure to follow these instructions voids the Limited Warranty. Finishing panel edges is optional for Patio Doors.

To maintain proper product performance do not paint, finish or remove the weatherstripping, mohair dust pads, gaskets or vinyl parts. Air and water leakage will result if these parts are removed. After finishing, allow venting Doors and doors to dry completely before closing them. If paint, stain or finish gets on the weatherstripping, wipe it off immediately with a damp cloth.

PAINTING INSTRUCTIONS: Wood door exteriors are factory primed. Wood doors require painting immediately after installation. The factory applied primer is not intended for long term exterior exposure. Sand all un-primed interior wood surfaces lightly with 180 grit or finer sandpaper before priming and painting. Use two coats of a 100% latex paint that has a good blocking resistance. Finishing panel edges is optional for Patio Doors.

Pella Corporation is not responsible for interior paint and stain finish imperfections for any product that is not factory-applied by Pella Corporation. For additional information on finishing see the Pella Owner's Manual or go to www.pella.com.

The use of unapproved finishes, solvents or cleaning chemicals may cause adverse reactions with door materials. Pella will not be responsible for problems caused by the use of unapproved materials. If in doubt, contact your local retailer or representative.

EXTERIOR FINISH OF EXISTING FRAME (POCKET REPLACEMENT): It is the responsibility of the homeowner, contractor or installer to ensure any exposed unfinished wood is covered or finished. Possible methods include, however are not limited to, covering with aluminum coil stock or painting.

FULL FRAME OR PANEL REMOVAL WHEN PREPARING TO INSTALL A NEW SLIDING DOOR

This method of Full Frame Removal involves removing the panels and entire frame of the existing door from the wall. The resulting opening is the original rough opening. The existing door nailing fins are usually nailed to the studs in frame construction with siding, brick veneer or other exterior material applied over the fin on the outside. The interior may have a drywall return from the wall to the door frame.

CAUTION Many doors in older homes are painted with lead-based paint. Removal of old doors may disturb this paint. Proper precautions must be taken to minimize exposure to dust and debris. Consult state or local authorities for more information and/or go to www.epa.gov/lead for more information.

TOOLS REQUIRED:

- Utility knife 
- Pry bar 
- Hammer 
- Heat gun 
- Angle grinder 
- Phillips and Standard screwdrivers 
- Reciprocating saw 
- Putty knife 
- Deglazing wheel 

**REMEMBER TO USE APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.
APPLY ADHESIVE FILM OR DUCT TAPE TO THE GLASS TO PREVENT BREAKAGE.**

ALUMINUM PANEL AND/OR FRAME REMOVAL

- Score the paint or varnish between the interior trim and the wall or between the drywall return and the door frame to minimize damage. (Frame removal only).
- Remove the interior trim.
- Score the sealant or paint between the exterior siding or brick and the door frame.
- Remove the screen and vent panel from the old door. If it is not removable, see steps G-I.
- Remove the division bar by removing the screws at the ends or cutting it with a reciprocating saw.
- Remove the fixed panel. Remove any screws holding the fixed panel. Slide it and lift it out of the frame.

If the panels are not removable or the glass is sealed to the frame:

- Remove the glazing bead using a putty knife or small pry bar.
- For single pane doors with divided lights (grids). Use an angle grinder with a cut-off wheel to cut the end of the bars where they intersect with the sash or frame. This will allow the door glass to be removed more quickly.
- Heat the glazing seal using an electric heat gun.
- While applying heat, press a de-glazing wheel between the glass and panel or frame. Continue around the perimeter of the panel. Apply light, constant pressure to separate the glass from the panel or frame. Recycle or dispose of the glass properly.

Note: Wear appropriate personal protective equipment and keep the heat source away from flammable materials.

Stop here for pocket replacement, complete steps K-L for full frame replacement (Not applicable for flush flange pocket replacement).

- Cut through the frame using a reciprocating saw.
- Pry the frame away from the brick or siding. Use a block of wood under the pry bar to protect interior or exterior finishes. Dispose or recycle of the frame materials properly.

BRICKMOULD FRAME REMOVAL

- Score paint or varnish between the interior trim and the wall with a sharp utility knife.

Note: This will minimize the damage to the interior wall and trim.

- Remove the interior trim. Remove the interior trim from all the four sides of the door including the stool at the bottom of the door. If the interior trim is being reused, pull the nails out through the back side of the board with nipper pliers.
- Cut the exterior sealant line between the exterior brickmould or trim and the exterior siding or wall cladding.
- Remove the exterior brickmould or flat trim. Remove hinge and strike screws.

Note: DO NOT disturb existing head flashings.

- Remove the door frame.

Consult with local providers and authorities to recycle or properly dispose of old door components.

PREPARING FOR SLIDING DOOR INSTALLATION WITH FLUSH FLANGE OR ENDURA CLAD EXTERIOR TRIM FOR REPLACEMENT

YOU WILL NEED TO SUPPLY:

- Moisture resistant shims/spacers (12 to 20)
- Fasteners (see anchor instructions and tables at the end of this booklet)
- Closed cell foam backer rod/sealant backer (21 to 30 ft.)
- Pella® SmartFlash™ foil backed butyl window and door flashing tape or equivalent
- Pella Window and Door Installation Sealant or equivalent high quality, multi-purpose sealant.
- Low Expansion, low pressure polyurethane insulating window and door foam sealant. DO NOT use high pressure or latex foams
- Sill pan (optional) 6-5/8" x (Rough Opening Width +2)
- Pella aluminum sill support or wood blocking
- Interior trim and/or jamb extensions (15 to 40 ft.)

INSTALLATION CLIP OPTION

(Pella® Reserve, Pella® Lifestyle Series and Pella® Impervia only):

- 6" installation clips (710L)
- #8 x 1-1/2" corrosion resistant screws or 3/16" x 1-1/2" masonry screws

Clip 710L

TOOLS REQUIRED:

- Tape measure
- Level
- Square
- Hammer
- Stapler
- Sealant Gun
- Scissors or utility knife
- Tin Snips
- Screwdrivers (#2 Phillips with 8" shaft and small flat blade)
- Drill
- Drill bits 1/8", 5/32", 3/8", and masonry drill bits for masonry applications
- Fine tooth chop saw
- Large hook tool

WARNING Installation will require (2) or more persons for safety reasons.

ROUGH OPENING VERIFICATION

A. Confirm the opening is plumb and level.

NOTICE It is critical the bottom is level and it does not slope to the interior or exterior.

B. Remove dirt, oil or debris from the opening and surrounding wall surfaces.

C. Confirm the door will fit the opening. Measure all four sides of the opening to make sure it is 1/2" to 3/4" larger than the door in both width and 1/2" larger in height. Measure the width and height in several places to ensure the header or studs are not bowed. Confirm the opening header is not sagging. The header must be designed to bear the weight of all building/structure loads.

NOTICE 1-1/2" or more of solid wood blocking is required around the perimeter of the opening. Fix any problems with the rough opening before proceeding.

NOTICE It is important to consider the door's exposure to weather, the exterior landing surface type and its proximity to the door sill, and to confirm impervious exterior surfaces properly slope away from the door prior to continuing with installation.

Before installing, verify performance of the product meets the requirements of the application and region. To reduce the likelihood of water infiltration where application exceeds product performance, install doors under an overhang that extends to meet a 45 degree line from the door sill and slope the exterior 2 degrees away from the door or use a stepdown. Failure to do so may result in damage to the interior of the structure.

NOTICE FAILURE TO PROVIDE ADEQUATE ROUGH OPENING SILL PROTECTION FOR WOOD THRESHOLDS WILL VOID PRODUCT WARRANTY.

PREPARE THE DOOR FOR INSTALLATION

A. Remove plastic wrap and cardboard packaging from the door. For Pella® 250 Series doors with laminate film, remove protective film from all parts.

B. Inspect the product for any damage such as cracks, dents or scratches. DO NOT install damaged products.

C. For Knock-Down (KD) Doors: Complete field assembly of the frame in accordance with the KD assembly instructions.

D. All Doors: Remove the vent panel prior to installation (if applicable). Slide the vent panel about halfway open. Lift the panel up and tilt the bottom of the panel away from the door frame. Then lower the panel out of the top track. Carefully set the panel aside.

Pella® Reserve and Lifestyle Series Sliding Doors: Remove the shipping spacers off the top and bottom of the vent panel.

Pella® Impervia: Remove the shipping spacers from the bottom of the vent panel.

Pella® 250 Series: Remove the jamb pocket covers/caps and head cover/cap. For laminate units, remove the laminate protective film. Pre-drill anchor holes.

Pella® 150 Series and Encompass by Pella®: If reversing the door slide direction, refer to the instructions later in this booklet.

F. Units with EnduraClad Exterior Trim without fin or pre-punched holes: Install clips or pre-drill holes for frame screws.

Installation clip option (Reserve, Lifestyle Series, and Impervia): Installation clips can often be used in place of frame screws. Slide clips into the t-slot groove at the upper frame corners and secure clips to the frame with tape.

Refer to the anchor pages at the end of this booklet. Additional preparation may be required for Performance Upgrade, impact-resistant products, or to comply with local building code requirements.

G. Read the entire instruction before proceeding.

These instructions were developed and tested for use with wall systems designed to manage water. These instructions are not to be used with any other construction methods or door frame types. Installation instructions for use with other construction methods or frame types may be obtained from Pella® Corporation, your local Pella retailer or www.installpella.com. Building designs, construction methods, building materials, and site conditions unique to your project may require an installation method different from these instructions and/or additional care. Determining the appropriate installation method is the responsibility of you, your architect, or construction professional.

BY PURCHASING, INSTALLING OR USING PELLA PRODUCTS (INCLUDES PELLA GOODS AND PELLA SERVICES), YOU AGREED TO THE TERMS OF THE LIMITED WARRANTY AND YOU AND PELLA FURTHER AGREE TO ARBITRATE DISPUTES ARISING OUT OF OR RELATING TO PELLA PRODUCTS, AND YOU WAIVE ANY RIGHT TO PARTICIPATE IN A CLASS ACTION RELATED TO PELLA PRODUCTS unless you notify Pella of your decision to opt out of the Arbitration Agreement no later than ninety (90) calendar days from the date you purchased or otherwise took ownership of Your Pella Goods. Opting out of the Arbitration Agreement will not affect the coverage provided by any applicable limited warranty pertaining to Your Pella Products. For opt out information and additional details please read the Limited Warranty and Arbitration Agreement for your Pella Products at www.Pella.com/arbitration.

FULL FRAME REPLACEMENT WITH ENDURACLAD BRICKMOULD

FULL FRAME REPLACEMENT OF WOOD BRICKMOULD DOORS WITH NEW PELLA® ENDURACLAD® EXTERIOR TRIM

1 PREPARE THE OPENING

Refer to the brickmould frame removal instructions at the beginning of this booklet.

- A. **Measure the width and height of the brick/siding opening and the rough opening.** The new brickmould must be 1/2" to 3/4" smaller than the brick/siding opening. The new window frame must be 1/2" to 3/4" smaller than the rough opening in width and at least 3/8" smaller in height.
- B. **Repair the wall surface around the opening** (if necessary) by installing new blocking flush with the surface of the existing sheathing. Repair the existing building wrap with by cutting it flush with the rough opening and covering any gaps with flashing tape.

Applications with Building Wrap

- C. **Install head flashing** by applying sealant to the back of the upturned leg and inserting the upturned leg behind the building wrap as shown.

Applications without Building Wrap (steps D and E).

- D. **Cut a piece of flashing tape** equal to the width of the rough opening.
- E. **Apply the tape across the top of the rough opening** so it extends onto the surface of the wall at least 1". Place the tape below any existing head flashing.
- F. **Cut 2 pieces of flashing tape** 12" longer than opening width.
- G. **Apply sill flashing tape #1** at the sill extending 1" to the exterior and 6" up each jamb.
- H. **Cut 1" wide tabs at each corner** by tearing the foil 1/2" each way from corner.
- I. **Apply sill flashing tape #2** overlapping tape #1 by 1" minimum.

Note: Press all tape down firmly.

- J. **Attach a Pella aluminum sill support** or wood blocking flush with the opening sill to support the exterior edge of the door frame if existing materials will not provide support. Skip this step for doors with sill nailing fins.

2 SET AND FASTEN THE DOOR

- A. **Place three 3/8" beads of sealant across the opening sill.** Place the interior-most bead 1/2" from where the interior of the door sill will remain after installation. Continue this bead up the sill pan lip, if applicable. **Place a second bead** beginning from the interior bead 1/2" from each side, out to the exterior of the framing and along the opening. Leave 2" voids 4" from the corner and at the center. **Place a third bead** where the exterior of the door sill will remain after installation.

- B. **Place a continuous 3/8" bead of sealant** on the weather barrier (or sheathing if weather barrier is not present) along the jambs and head, approximately 1/2" from the rough opening edge.

- C. **Center the bottom of the door in the opening** and tilt the door into position. Do not slide the door into the opening. Sliding will damage the sealant lines.

Check the jambs for plumb and confirm there is room for shimming between the jambs and opening on each side.

- D. **Walk across the sill to compress the sealant** and confirm the frame is firmly on the opening sill.
- E. **Pre-drill and drive two screws one near the bottom of each side** of the door through the frame or clip. (See anchor instructions at the end of this booklet for screw or clip spacing.)

FULL FRAME REPLACEMENT WITH ENDURACLAD BRICKMOULD

FULL FRAME REPLACEMENT OF WOOD BRICKMOULD DOORS WITH NEW PELLA® ENDURACLAD® EXTERIOR TRIM

2 SET AND FASTEN THE DOOR CONTINUED

- F. **Plumb and square the door.** Place shims near the top corners, as necessary. Shims must be flat and support the frame to the exterior the full wall depth. On the interior, stop shims 1/2" short to allow for a continuous interior sealant, or seal across shims after trimming flush to the frame.

- G. **Drive two fasteners**, one near the top corner on each side.
- H. **Check the door placement** by measuring from the interior surface of the door frame or jamb extension to the interior surface of the wall for consistency.

Note: For 250 Series and knock down doors, insert fixed panel. Refer to KD assembly instructions (if applicable). Do not fasten 250 fixed panel until after vent panel is operational.

- I. **Anchor the frame.** Refer to the anchor page(s). Add additional screws through the frame or attach installation clips as required.

NOTICE Shims are required at each screw location. Refer to the applicable anchor instruction page(s) near the end of this booklet.

- J. **Install the sliding panel.** From the exterior, tilt the top of the panel and insert it into the top track. Move the bottom of the panel toward the door frame and set it on the bottom track. Be careful not to pinch your fingers between the two panels. DO NOT close the sliding panel until the hardware is installed. The door may lock when closed.
- K. **Check door operation.**

Reserve and Lifestyle Series Doors: Adjust Vent Lock Tip (if applicable).
Impervia Doors: If Vent Lock does not lock, loosen screws and adjust strike plate locations and re-tighten screws.

NOTICE Adjust shims to correct any issues with plumb, square, operation or reveal.

- L. **Adjust the panel height to 1/4" clearance from bottom of panel to sill track** by removing the hole cover (if applicable) and using a #2 Phillips screwdriver to turn the roller adjustment screw clockwise (raise) or counterclockwise (lower).

Note: Reinstall the hole cover (if applicable) once adjustments are complete.

NOTICE Check vent panel to frame and vent panel to fixed panel reveal.

NOTICE For doors with heavy laminate or triple-pane glass use a small pry bar to raise the panel while turning the adjustment screw. This will prevent the threads from being stripped (applies to all methods).

2 SET AND FASTEN THE DOOR CONTINUED

- M. **Install the bumpers (if applicable).** Refer to the anchor instructions at the end of this booklet.
- N. **Install the handles.** Refer to the instruction in the hardware box.
- O. **Install the strikes/keepers.** Refer to the provided instruction or to the anchor page(s) and adjust as required to ensure handle locks and operates correctly.

250 Series Doors: Install the keeper after the sliding panel is confirmed to operate and lock. Then fasten the fixed panel to the door frame.

IMPORTANT Install the vent lock strike plate. Refer to the Secure Vent Lock Strike Plate installation document located in the hardware box.

- P. **Install vent panel retainers (if applicable)** or reinstall if the vent panel was removed during installation. Refer to the instructions included in the panel retainer hardware package.

WARNING Panel Retainer **MUST** be installed to reduce risk of serious injury or death from a falling door panel. If panel retainer is lost or damaged, DO NOT INSTALL DOOR. Contact your Local Pella Seller or Pella Customer Service (877) 473-5527 for replacement.

3 SEAL THE DOOR

- A. **Install interior sealant.** Refer to the interior sealant instructions at the end of this booklet. Use additional sealant around clips to prevent air and water infiltration
- B. **Attach sill support or wood blocking.** If support was not attached before setting the door and the concrete does not provide support for the exterior of the door sill.
- C. **Install exterior sealant between the edge of the brickmould and the finished wall material or flashing.** Refer to the exterior sealant instructions at the end of this booklet.

ANCHOR INSTRUCTIONS – FLUSH FLANGE AND ENDURACLAD® EXTERIOR TRIM INSTALLATION METHODS FOR PELLA® RESERVE AND PELLA® LIFESTYLE SERIES SLIDING PATIO DOORS

Note: Standard performance only. Additional anchoring may be required for Performance Upgrade or to comply with local building code requirements.

Location	Anchor Type		Instructions	Drawing	
	Wood	Masonry			
Head	Vent Lock Strike	#10 x 2-1/2" (provided)	Pilot drill using 5/32" bit and drive (1) screw through Vent Lock Strike.	B	
	Fixed Panel Bracket		Pilot drill using 5/32" bit and drive (1) screw through Fixed Panel Bracket.	C	
	Frame Screws	#10 x 2-1/2" PH	Pilot drill using 5/32" bit and drive screws 6" from corner.	C.1	
	Interlocker Frame Screws*		OX or XO and Performance Upgrade or over 95.25" x 95.5" only: Add screws 5" on either side of Vent Lock Strike and Fixed Panel Bracket screws.	C.2	
	Joiner Frame Screws		OXO or OXXO only: Pilot drill using 5/32" bit and drive screws at midpoint of joiner (OXXO) or through joiner part (OXO) and 5" either side of joiner midpoint.	D	
Installation Clips	(2) #6 x 1-1/4"	3/16" x 1-1/2"	Slide clip into slot from end and adhere to frame with tape 6" from corner.	E	
Jamb	Lock Strike (OX or XO)	#8 x 3" (provided)	3/16" x 3"	Complete per each strike. Pilot drill using 5/32" bit and install (2) installation screws diagonally. Install cover after screws.	E.1
	Lock Strike (OXO or OXXO)	#8 x 2-1/2" (provided)	N/A	Install (2) short screws diagonally. Install cover after screws.	C
	Frame Screws	#10 x 2-1/2" PH	1/4" x 2-1/2"	Pilot drill using 5/32" bit and drive screws 6" from corner and 20" on center.	D
	Installation Clips	(2) #6 x 1-1/4"	3/16" x 1-1/2"	Slide clip into slot from end and adhere to frame with tape 6" from corner and 20" on center.	F
Sill	Frame Screws*	#8 x 3" FH or #10 x 2-1/2" FH	1/4" x 2-1/2"	Performance Upgrade or over 95.25" x 95.5" only: Use factory pre-drilled holes (if applicable). Pilot drill with 1/8" bit and apply sealant before driving screws. Not required if Standard Performance OX or XO and 95.25" x 95.5" or under.	

Use corrosion resistant fasteners compatible with construction materials.
Shim as required at anchor locations.

For light gauge steel framing, use #10 self-tapping screws with minimum 3 thread embedment.
*Additional anchors required for Performance Upgrade or frame sizes exceeding 95.25" x 95.5".

*For Performance Upgrade, install the Performance Upgrade Interlocker. Refer to provided instructions.

Units with Pella EnduraClad exterior trim without fins or pre-punched holes must be anchored with frame screws or installation clips.

Elevation View

Interior Sealant Instructions

CAUTION Continuous backer rod (as necessary) and a high quality, low-odor interior sealant such as Pella Window and Door Installation Sealant (or equivalent) is recommended for commercial or high performance installations to create the continuous interior seal. Follow the directions on the cartridge. For standard performance or products with factory applied jamb extensions, use low pressure polyurethane insulating foams. Follow the directions on the can. Do not use high pressure or latex foams. Fiberglass batt or similar insulation is not recommended as it can absorb water and does not act as an air seal.

- A. **Insert the nozzle or straw** between the rough opening and door frame from the interior. Use a pliers (if necessary) to compress the end of a straw tube to allow it to fit in tight openings.
- B. **Place a 1" deep bead of foam approximately 1" from the interior of the frame** to allow for expansion. DO NOT fill the entire depth of the rough opening cavity.

Note: Apply foam between the frame and rough opening, NOT between jamb extensions and the rough opening.

- C. **Re-Check door operation** and remove remaining shipping spacers after foam installation. Excess foam may be removed with a serrated knife after it cures.
- D. **To ensure a continuous interior seal**, apply sealant over or around any shims or clips interrupting the foam seal.
- E. **Place a continuous bead of sealant across the inner sill at the intersection of the door sill and subfloor.** Continue the sealant 6" up each jamb.

Exterior Sealant Instructions

CAUTION Use a high quality, multi-purpose exterior sealant such as Pella Door and Door Installation Sealant. Follow the directions on the cartridge.

Flush Flange Doors:

- A. **Place a corner bead of sealant** on the edge of the flush flange on the top and sides.

Flush Flange Doors

- B. **For a door without the flush flange at the sill**, install a corner cap at the bottom of each jamb flush flange. Remove the release paper from the adhesive strips on the back of the corner cap, and press the corner cap onto the bottom of the jamb flush flange.

Enduraclad Exterior Trim Doors:

- A. **Insert backer rod 3/8" deep** in the space around the door. Backer rod adds shape and controls the depth of the sealant line.
- B. **Apply a continuous bead of sealant to the entire perimeter of the door.**
- C. **Shape, tool and clean excess sealant.** When finished, the sealant should be the shape of an hourglass.

OPTIONAL SILL PAN INSTRUCTIONS

A. **Cut the sill pan** to the width of the rough opening plus 2".
 NOTE: The 2" added onto the rough opening width is for a 1" bend on each end.

B. **Make a 1" cut** in each fold at both end of the sill pan.
 NOTE: These cuts will allow the edges of the sill pan to be bent.

C. **Cut 1" off each end** of the interior sill pan lip.

D. **Bend each end** of the center panel up.

E. **Install the sill pan** by sliding into place until the exterior sill pan lip is flush with the exterior of the rough opening.

F. **Apply sill flashing tape.** Cut a piece of flashing tape 2" longer than the opening width. Apply at the bottom of the opening, covering the exterior sill pan lip as shown.

NOTE: If applicable, apply spray adhesive to building felt prior to applying the flashing tape.

G. **Cut a piece of flashing tape** to the width of the opening. Install tape to the sill pan and overlap the flashing tape from step 1F by 1". If needed add a second or third piece of flashing tape until the sill pan is covered to the interior sill pan lip.

NOTE: The purpose of this tape is to seal the sill screws when installing the door.

H. **Cut two 9" pieces of flashing tape** with a 1" x 3" tab at the bottom, on opposite corners as shown.

I. **Apply the tabbed 9" pieces of flashing tape.** The tape is applied so 2" will cover the inside of the rough opening and lap over the side flange of the sill pan. The 1" x 3" tab laps over the bottom flashing tape as shown.

J. **Cut two 6" pieces of flashing tape** and apply to each side of the rough opening, overlapping the first piece by 1" and lapping the bottom over the side flange of the sill pan as shown.

K. **Cut two pieces of flashing tape 1-1/2" x 6"** and apply to the bottom corners of the opening by beginning in the corner of the sill pan, with 3/4" of the tape applied to the sill pan and 3/4" of the tape applied to the side flange. The remainder of the tape is to be at a 45 degree angle onto the exterior.

L. **Attach the aluminum sill support** or wood blocking to the exterior of the box plate to support the edge of the door sill. Place the sill support flush with the subfloor.

Concrete Slab (without sill pan) Instructions

NOTE: Thoroughly clean the slab where sealants will be installed. Instead of installing flashing tape across the bottom of the rough opening, complete the following:

- A. **Install flashing tape** at the bottom 6" of the rough opening jambs.
- B. **Cut (2) 9" pieces of flashing tape** as shown in step 1H above.
- C. **Install them overlapping** the flashing tape installed in step A by 1".
- D. **Place a 3/8" bead of sealant** where the bottom edge of the flashing tape meet the concrete slab.
- E. **When folding building wrap in at the jambs**, cut at a 30 degree angle as illustrated.

Follow the applicable installation method pages to complete the installation except seal the door sill directly to the slab.
